BUILD 2026-06-24

THE 60-SECOND READ: WHAT TO DO

DO NOW

2

Hide the test-only switches

"Simulate sync failure" and "Go offline" show on the live scan screen. A clerk could break their own session by accident.

impact High

effort Low

Move Delete out of the scan zone

Delete sits next to Correct in every counts row, right where fast scanning happens. One slip wipes a count.

impact High

effort Med

DO NEXT

3

Lighten the counts table

13 columns and 4 buttons per row. Show Qty, Product, Location, Last scanned; hide the rest until tapped.

impact High

effort Med

Raise contrast for the aisle

The status line and red-on-pink alert are hard to read in warehouse light. Hit WCAG AA.

impact Med

effort Low

Say what it is at login

Add one line: "Count your stock by scanning. Never double-count." A stranger learns the point in two seconds.

impact Med

effort Low

DO LATER

3

Polish pass for a paid-SaaS feel

Tighten spacing, density, and consistency across screens so it reads as a product, not a tool.

impact Med

effort Med

Lock down multi-tenant and roles

Prove no shop can see another shop's data before selling to many shops.

impact High

effort High

Make the aisle phone first-class

One hand, big targets, works offline. That is where inventory actually happens.

impact High

effort High

QUICK WINS // LOW EFFORT, HIGH PAYOFF

✓ Fix the floating "N" badge overlapping the table

✓ Un-truncate the export menu labels

✓ Auto-dismiss the "sent to review" banner

✓ Add the one-line login tagline

The live scan screen, reviewed this week (local mock data).

ALREADY WORKING (KEEP THESE)

- ✓ Needs Review copy: "AI results are SUGGESTIONS only, never trusted until you approve." Rare and trust-building.

✓ The Reason column explains every result in plain words.
- ✓ The scan box is the clear primary action, focused by default.

✓ Trust is visible everywhere: Synced badges, pending-sync count, alias lists, Retry.

GROWTH PLAYBOOK

Highest ROI for the shop

The scan to count to export loop already saves real time. Next best: make resolving an unknown one tap. Shops pay for provably-never-double-count plus clean export.

Invite a friend

After a session or export, prompt "Invite a teammate to scan with you." Reward an extra location or more lookups. Ship a share link first.

Marketing angle

"Scan, count, done. Never double-count." Target independent tire and auto shops first. Channels: trade groups, suppliers, a 60-second demo.

Competitor wedge

vs Sortly, inFlow, Zoho: your wedge is dead-simple scanning, multi-trade, and offline tolerance. Confirm in the monthly run.

Activation

Aha is the first instant count. Friction: login before any value. Add a "try a sample scan" demo on first run.

Pricing

Free (1 location), Pro (multi-location, export, auto-decode), Business (multi-user, API). Gate auto-decode behind Pro.

Retention

Return trigger is the regular count. Biggest churn risk is one data-trust failure. Add a scheduled "time to count" nudge.

Strategy (90 days)

Finish tenant isolation and roles, add multi-user sessions, make the aisle phone first-class. Do not add more AI providers yet.

How this was made: synthesis-lead review of 6 captured local screenshots across 14 lenses plus a live git drift check. Performance not measured this run. The full 27-agent fleet (local and live) runs every Sunday 6pm or on demand: npm run intel:now. \$0 API, runs on your Claude subscription. Report-only: nothing in your app was changed.
